

- Do you want to deepen your knowledge of advanced computational methods at the intersection of medicine, physics and computer science?
- Do you want to meet the leading Slovenian experts in the field of medical data analysis and representatives of successful Slovenian companies?
- Do you want to connect with high school and university students of various fields and compete for prizes?

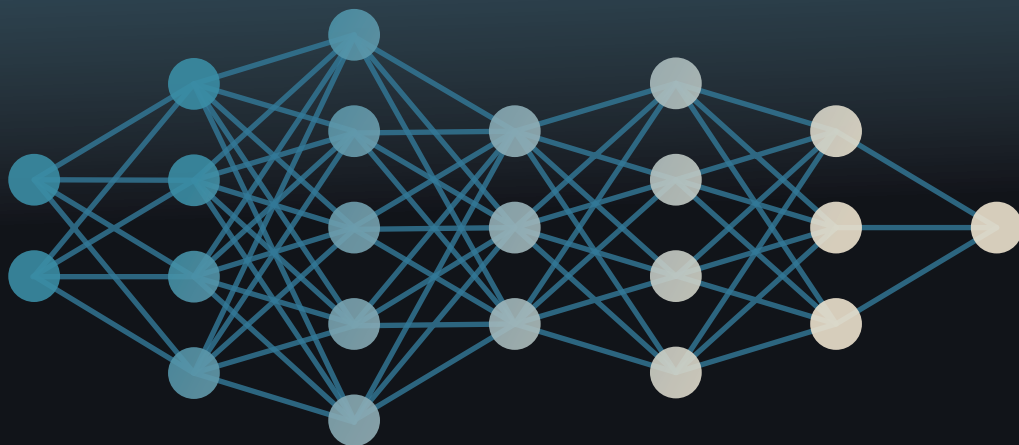

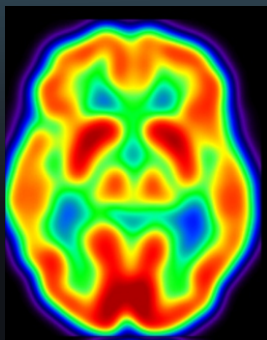

Register your team* for the competition in the development of new analytical methods in medicine - LYNX

organized by the Association of Mathematicians, Physicists and Astronomers of Slovenia (DMFA) and the Medical Physics Research Program from the Faculty of Mathematics and Physics (FMF).

The competition will begin with an introductory lecture on **February 28 2022**, where the background and the problem will be presented.

The competition will take place in two rounds.

The first round of the competition will take place from **February 28 2022**, to **March 21 2022**. The top five teams of the first round will advance to the second round of the competition, in which they will have 48 hours to finish, starting on **April 9 2022**. The top three teams of the second round of the competition will receive a cash prize and recognition for their participation.

*Students of all majors who form a team of up to three members can apply for the competition. Same conditions apply to high school students. The teams may consist of a mix of high school and university students.
